SafeNet Luna Network HSM 7.1

CUSTOMER RELEASE NOTES

Issue Date: 23 January 2018

Document Part Number: 007-013580-003 Rev. B

The most up-to-date version of this document is posted to the Technical Support Customer Portal at
https://supportportal.gemalto.com

Contents

Product Description

The SafeNet Luna Network HSM secures your sensitive data and critical applications by storing, protecting and managing your cryptographic keys in a high-assurance, tamper-resistant, network-attached appliance that offers market-leading performance. The SafeNet Luna Network HSM meets compliance and audit needs for FIPS 140, HIPAA, PCI-DSS, eIDAS, GDPR, and others, in highly-regulated industries including Financial, Healthcare, and Government.

The SafeNet Luna Network HSM offers up to 100 HSM partitions, high-availability configuration options, remote management, PED, backup, and dual hot-swappable power supplies.

Release Description

SafeNet Luna Network HSM 7.1 is a field update release of Gemalto's 7.x SafeNet Luna Network HSM. It includes Client software with drivers and tools, appliance software update, and new firmware for the HSM.

New Features and Enhancements

This section highlights what's new in SafeNet Luna Network HSM 7.1.

Policy Templates

The HSM or Partition SO can save a copy of their organization's preferred HSM or partition policy settings to a template. They can then use this template to configure policy settings when initializing other HSMs or partitions.

This can save time and effort when deploying multiple HSMs or partitions. It also ensures consistency across your HSMs and partitions, which helps to simplify future audit and compliance requirements. [Requires HSM firmware 7.1]

Configurable Policies for Export of Private Keys

The Partition SO can use partition policies to control whether or not the private keys in a given partition can be exported off the HSM. The ability to export private keys is particularly useful in use cases such as smart card & identity issuance, secure manufacturing, etc.

This gives organizations the ability to support a wider variety of use cases with their HSM, and also provides Partition SOs with more flexibility overall. [Requires HSM firmware 7.1]

Curve 25519 Available in FIPS Mode

Curve 25519 is now available for use in FIPS mode. [Requires HSM firmware 7.1]

REST API 5.0

REST API 5.0 is included with the SafeNet Luna HSM 7.1 release. Customers who upgrade their appliance to 7.1 will automatically receive the REST API 5.0 update as part of the upgrade.

REST API provides a set of web services which customers can use to communicate with and provision the HSM. For more information, refer to the REST API sections of the product documentation.

Fixes

A number of items have been addressed for this release, and are listed in the Resolved Issues section of this document.

Advisory Notes

This section highlights important issues you should be aware of before deploying this release.

CKA_EXTRACTABLE=FALSE on New Private Keys

Private keys now have their CKA_EXTRACTABLE attribute set to FALSE by default when they are created. Your applications must specify a value of **1** (TRUE) for this attribute on private keys you wish to wrap and export in Key Export mode.

A patch for the Luna Java Provider (LunaProvider) on 32-bit and 64-bit Linux client systems is available from the Gemalto Customer Support Portal (DOW0002629).

PED Upgrade Needed for Currently-Owned PEDs

If you have older PEDs that you intend to use with SafeNet Luna HSM 7.0 or later, you must upgrade to firmware 2.7.1 (or newer). The upgrade and accompanying documentation (007-012337-003_PED_upgrade_2-7-1-5.pdf) are available from the Gemalto Support Portal.

New USB-powered PED

Gemalto is pleased to announce the availability of SafeNet Luna HSM PIN Entry Device (PED) v2.8. The v2.8 PED contains new hardware that enables the PED to be USB-powered; there is no longer a requirement for an external DC power Adapter. PED v2.8 is functionally equivalent to your existing (pre-generation) PEDs and is compatible with HSM versions, 5.x, 6.x, and 7.x.

PED v2.8 ships with firmware 2.8.0. Note that you cannot upgrade existing PEDs to the 2.8.0 version; existing PEDs continue to need a separate DC power adapter for remote PED and upgrade use. The model number on the manufacturer's label identifies the refreshed PED: PED-06-0001.

To use the new USB-powered PED

1. Ensure the SafeNet Luna HSM Client software is installed on the Windows computer that will act as the PED Server to your SafeNet Luna HSM. Installing the Remote PED component of the SafeNet Luna client installs the required driver.

2. Connect the PED to the computer where you installed the Remote PED component of the SafeNet Luna client using the USB micro connector on the PED and a USB socket on your computer.

3. After you connect the PED to the host computer, it will take 30 to 60 seconds for initial boot-up, during which time a series of messages are displayed, as listed below:

   BOOT V.1.1.0-1

   CORE V.3.0.0-1

   Loading PED...

   Entering...

4. After the boot process is complete, the PED displays **Local PED mode** and the **Awaiting command...** prompt. Your new PED is now ready for use.

5. To enter Remote PED mode, if needed, exit Local PED mode with the "< " key, and from the **Select Mode** menu, select option **7 Remote PED**.

STC over IPv6 is Unavailable

STC client-partition links are not available over an IPv6 network.

Remote Backup Over IPv6 is Unavailable

Network connections from the SafeNet Luna Client to a Remote Backup Server must use IPv4.

> **NOTE** Network connections from the client to the HSMs you want to backup using RBS can use IPv6. Only the connection from the client to the RBS server requires IPv4.

HA Groups Containing Members From Different Releases

You can configure an HA group containing release 7.1 and release 5/6.x partitions to easily migrate cryptographic objects to the new HSM.

> **NOTE** Failover during sustained application in a mixed-release HA group has not been fully characterized for all failure scenarios.

HSM Logs Sent to Messages Log

The **hsm.log** file is deprecated and has been removed from this release. The HSM logs are now sent to the **messages** log.

> **NOTE** Although it is ignored, the **hsm** option appears in the syntax for some **syslog** commands (such as **syslog tail -logfiles**).

Supported Operating Systems

This section lists the supported software, hardware, and optional upgrades for the HSM.

SafeNet Luna HSM Client

You can install the SafeNet Luna HSM Client 7.1 on the following operating systems:

Operating System	Version	64-bit applications on 64-bit OS	32-bit applications on 64-bit OS	32-bit applications on 32-bit OS
Windows	10	Yes	Yes	No
	2012 R2	Yes	Yes	No
	2016	Yes	Yes	No
Redhat-based Linux (including variants like CentOS and Oracle Enterprise Linux)	6	Yes	Yes	Yes
	7	Yes	Yes	Yes
AIX **Note:** SafeNet Luna Network HSM client only.	7.1	Yes	Yes	No
Solaris (SPARC/x86) **Note:** SafeNet Luna Network HSM client only.	11	Yes	Yes	No
Ubuntu *	14.04	Yes	No	Yes

* The Linux installer for Luna Client software is compiled as .rpm packages. To install on a Debian-based distribution, such as Ubuntu, "alien" is used to convert the packages. We used "build-essential":

apt-get install build-essential alien

You might need to account for your particular system and any pre-existing dependencies for your other applications.

Remote PED Server

The remote PED server software is included with the SafeNet Luna HSM client software. You must install the SafeNet Luna HSM client, with the PED server option, on each workstation used to host a remote PED. The Remote PED server software is supported on the following operating systems:

> Windows 10 (64-bit)

> Windows 2012 R2

> Windows 2016

Supported Cryptographic APIs

Applications can perform cryptographic operations using the following APIs:

> PKCS#11 2.20

> Java 7/8/9

> OpenSSL

> Microsoft CAPI

> Microsoft CNG

Upgrade Paths

Table 1: Upgrade Paths

Component	Directly from version	To version
SafeNet Luna HSM client software	Any	7.1
SafeNet Luna Network HSM appliance software	7.0	7.1
HSM firmware	7.0.1, 7.0.2	7.1.0
SafeNet Backup HSM firmware	6.10.9, 6.26.0	6.27.0
SafeNet Local PED/Remote PED firmware	2.7.1	N/A
	2.8.0	N/A

Known Issues

This section lists the issues known to exist in the product at the time of release. Workarounds are provided where available. The following table defines the severity level assigned to each listed issue.

Table 2: Issue severity definitions

Severity	Classification	Definition
H	High	Reasonable workaround exists.
M	Medium	Medium severity problems.
L	Low	Low severity problems.

Table 3: List of known issues, new for release 7.1

Issue	Severity	Synopsis
LUNA-2663	H	**Problem:** In LunaSH, **hsm firmware upgrade** fails with errors (LUNA_RET_ UNKNOWN_COMMAND and RC_GENERAL_ERROR) if STC has been enabled prior to upgrade. **Workaround:** 1. Back up all important cryptographic material. 2. Press the decommission button on the back of the appliance. 3. Reinitialize the HSM and clear the tamper state. 4. Upgrade the HSM firmware. 5. Restore your partitions and objects from backup.
LUNA-2230	H	**Problem:** If HSM policy 39 (Allow Secure Trusted Channel) is turned off while STC is enabled on the admin channel, the HSM SO is unable to log in using **hsm login**. **Workaround:** If this occurs, exit LunaSH and log in again as the **admin** user. In general, disable STC on the admin channel (**hsm stc disable**) before setting HSM policy 39 to **0**.
LKX-3233 LKX-3201	H	**Problem:** Value for HSM policy 46 (Disable Decommission) cannot be changed. Attempting to change it returns a "fails dependencies" error. **Workaround:**None.

Issue	Severity	Synopsis
LUNA-2677	M	**Problem:** Private key wrapping in Key Export mode does not work when using the Luna Java provider (LunaProvider). **Workaround:** Download and apply Linux client patch (DOW0002629) from the Gemalto Customer Support Portal. Follow the README instructions to ensure that your Java application sets the appropriate key attributes.
LUNA-2261	M	**Problem:** "CKR_DATA_INVALID" on wrap/unwrap with **multitoken** on AIX and Solaris clients. **Workaround:** None.
LUNA-2252	M	**Problem:** Invalid options are displayed on Solaris installer. **Workaround:** Only the SafeNet Luna Network HSM is supported for Solaris; drivers for the PCIe HSM and USB HSM options are not provided at this time. If multiple options appear when installing SafeNet Luna HSM on Solaris, choose Network HSM only.
LUNA-2224	M	**Problem:** When you initialize an STC partition by applying a partition policy template, a confusing error (CKR_TOKEN_NOT_PRESENT) is returned. **Workaround:** None.
LUNA-2199	M	**Problem:** LunaCM occasionally freezes in Windows 2016 when a new slot is created or deleted. **Workaround:** End the LunaCM instance with Task Manager and restart LunaCM.
LUNA-2081	M	**Problem:** Multipart AES_KW operations on non-block-sized-data returns incorrect error code CKR_DEVICE_ERROR. **Workaround:** None.
LUNA-1927	M	**Problem:Problem:** HA - Unable to add new member to HA group after removing primary member **Workaround:** Restart LunaCM to update the slot list.
LUNA-1725	M	**Problem:** In LunaCM, **partition archive restore -replace** does not replace DUPLICATED objects in target partition. **Workaround:** Remove all duplicate objects from the target partition prior to running **partition archive restore -replace**.
LKX-3178	M	**Problem:** When you use an older client, and query partition-level capabilities and policies, the HSM returns incorrect policy numbers **Workaround:** Use the documentation to get the correct policy numbers.
LKX-3159	M	**Problem:** In LunaCM, **hsm information monitor** incorrectly reports HSM utilization **Workaround:** None.
LUNA-2347	L	**Problem:** Extraneous entry for partitionpolicytemplatepath is present in the MISC section of the Chrystoki.conf. **Workaround:** Ignore. This entry is not used by Luna 7 policy templates.
LUNA-2103	L	**Problem:** If you enter duplicate policies (policies with the same ID) in the partition policy template, the partition will take the last value. **Workaround:** Avoid duplicate policy IDs in partition policy template files.
LKX-3042	L	**Problem:** When partition policy 39: Allow start/end date attributes is enabled, all start

Issue	Severity	Synopsis
		dates must be later than January 01, 1970. **Workaround:** Ensure that start date attribute is later than January 01, 1970.

Table 4: List of known issues from release 7.0

Issue	Severity	Synopsis
LHSM-18236 CPP-628 LKX-554	M	**Problem:** Unable to add a member to an HA group if the Partition SO or Crypto Officer is currently logged in to the primary member of the HA group. **Workaround:** Ensure that the Partition SO or Crypto Officer are not logged in to the primary HA member partition when adding a new member.
LKX-2634	M	**Problem:** Cannot back up curve25519 key types to the SafeNet Luna Backup HSM. **Workaround:** Use cloning or HA to back up your curve25519 key types to another SafeNet Luna 7.0 HSM.
LUNA-1592	M	**Problem:** When trying to run the **HALogin.java** script, a CKR_UNKNOWN error is returned. **Workaround:** None. Do not use the **HALogin.java** sample.
LUNA-132 CPP-2505	M	**Problem:** When configuring a network device for IPv6 using SLAAC or DHCPv6, the IPv6 address is retrieved, but the name server and search domain are not. **Workaround:** Configure the name server and search domain manually, using the LunaSH command **network dns add** {**-nameserver** <ip_address> | **-searchdomain** <net_domain>}.
CPP-3261	M	**Problem:** After performing **sysconf config factoryreset**, the appliance host name is not reset. **Workaround:** None.
CPP-3241	M	**Problem:** Untarred audit log files are not visible to the user. **Workaround:** Untarred audit log files will not appear in the list of log files generated by the LunaSH command **my file list**, but they can still be verified using **audit log verify -file** <filename> **-serialsource** <serialnum>.
CPP-3191	M	**Problem:** After rebooting the appliance, occasionally clients cannot see partitions on the first connection attempt. **Workaround:** Run the **vtl verify** command again. The second attempt should be successful.
CPP-2954	M	**Problem:** The hsmCriticalEvent and hsmNonCriticalEvent counters incorrectly track HSM events. **Workaround:** None. SNMP hsmCriticalEvent and hsmNonCriticalEvent counters are not implemented in this release and will always remain 0.
LUNA-1227 CPP-2690	M	**Problem:** Warnings related to insserv LSB are generated for luna-snmp package when system updates are performed on Debian-based systems. **Workaround:** None.
CPP-1339	M	**Problem:** In LunaSH, **sysconf config restore** does not restore the SSH password for the admin user. If the password is not reset immediately, the admin user will be unable to login to the appliance in subsequent SSH sessions.

Issue	Severity	Synopsis
		Workaround: Use **sysconf config clear** to reset the admin password to the default. You must do this in the same session that you used to run the **sysconf config restore** command.
CPP-2376	M	**Problem:** On the Backup HSM, the **hsm init** command with the **-iped** option fails after **hsm factoryreset**. **Workaround:** Run the **hsm init** command again. The second attempt should be successful.
CPP-2368	M	**Problem:** The **hagroup list** command returns an error. **Workaround:** Run the **hagroup list** command again. The second attempt should be successful.
CPP-1348	M	**Problem:** Windows 10 occasionally crashes when trying to detect a serial port. This is a known issue with the Windows 10 PL2303 drivers. **Workaround:** If you experience trouble opening a serial connection using Windows 10, use another supported operating system. See "SafeNet Luna HSM Client" on page 4.
CPP-626 CPP-624	M	**Problem:** If you zeroize an HSM hosting an HA group member partition, all running cryptographic operations against the HA group fail. **Workaround:** Remove any member partition from the HA group before zeroizing the host HSM.
CPP-3235	L	**Problem:** In LunaCM, the **partition clone** command fails the first time if the Partition SO is logged in to the target slot. **Workaround:** Run the **partition clone** command again. The second attempt should be successful.
CPP-2576	L	**Problem:** Windows installer does not remove CSP and KSP registry entries for 32-bit setup when the Windows client is uninstalled. **Workaround:** No impact on service; registry entries may be deleted manually.
CPP-2488	L	**Problem:** Version 6.x and 7.x HSM role name abbreviations are not consistent. **Workaround:** Remember to use the full role name when logging in to Luna 6.x partitions.
CPP-2380	L	**Problem:** When running the **MiscCSRCertificateDemo.java** sample, a null pointer exception occurs. **Workaround:** None.
CPP-1249, LUNA-1681	L	**Problem:** Remote backup through TCP/IP via the LunaCM command **partition archive backup -slot remote -hostname** <hostname> **-port** <portnum> is not recognized. **Workaround:** Use RBS to backup partitions remotely.
LUNA-2022	L	**Problem:** Incorrect warning displayed when changing ssh restriction to bond slave device Message displayed is "Warning: SSH is already restricted to the specified ip address / ethernet card. No changes made." **Workaround:** None. You cannot bind SSH to a bond slave.
LUNA-2015	L	**Problem:** Default ntlsOperStatus for SNMP is incorrectly set to 0 (should be 3). This can lead to errors in applications that adhere to syntax strictly. **Workaround:** None.

Issue	Severity	Synopsis
LUNA-158 CPP-3384	L	**Problem:** After zeroization or factory reset, the STC cipher option is set to NULL_ENC. Output from **hsm stc status** includes "Cipher Name: No Cipher". **Workaround:** Run the LunaSH command **hsm stc cipher enable -all** to enable all available STC ciphers.
LUNA-1583 CPP-3387	L	**Problem:** On a new Linux client, the Luna HSM Client uninstaller hangs when a SafeNet Luna Backup HSM is connected to the client machine. **Workaround:** Disconnect the SafeNet Luna Backup HSM from the client before uninstalling.
LUNA-339	L	**Problem:** Some appliance sensor information is missing or incorrectly reported via SNMP. **Workaround:** Use the LunaSH command **status sensors** to obtain this information.
LUNA-218	L	**Problem:** You cannot add a host or network route using the LunaSH **network route add** command without including the gateway value. **Workaround:** None.
CPP-3404	L	**Problem:** CMU may crash or report a memory allocation error when using a non-FIPS signing mechanism in FIPS mode. **Workaround:** Specify a FIPS-approved signing mechanism such as **sha256withRSA**.
CPP-3326	L	**Problem:** Webserver appears to start but is not accessible when the SSL key file or certificate does not exist. **Workaround:** Create the certificate before starting the web service.
CPP-2925	L	**Problem:** When the **cklog** library is configured, an **error.txt** file containing extraneous messages may be created. **Workaround:** None.
CPP-932	L	**Problem**: If the configured audit logging directory is not found, the **pedclient** service fails with error **LOGGER_init failed**. **Workaround**: Ensure that the directory you configure for audit logging exists.

Resolved Issues

This section lists issues that have been resolved for the current release.

Table 5: List of resolved issues

Issue	Severity	Synopsis
LUNA-853	M	**Problem:** On Linux, the SafeNet Luna HSM Client software fails to install to a directory with spaces in its name. **Fixed**
LUNA-454	M	**Problem:**SafeNet Luna Network HSM appliance user names that begin with a non-alphanumeric character (period, dash, or underscore) may cause issues and/or potential system crashes. **Fixed:**
LUNA-264	M	**Problem:** On Linux, non-root users cannot initialize the STC token or create an STC client identity.

Issue	Severity	Synopsis
		Fixed
LUNA-263	M	**Problem:** On Linux, non-root users cannot configure the RBS server. **Fixed**
LUNA-261	M	**Problem:** On Linux, non-root users cannot add a new HSM server after **CAfile.pem** has been created by the root user. **Fixed**
LUNA-169	M	**Problem:** In LunaSH, **network show** displays an incorrect IPv6 Mask prefix. **Fixed**
LUNA-166	M	**Problem:** Running **package verify** and **package update** with the **-useevp** option in LunaSH produces a CKR_SIGNATURE_INVALID error. **Fixed**
LUNA-163	M	**Problem:** When the HSM audit logs are full, **audit login** appears to succeed, but the user is not actually logged in and cannot perform operations. **Fixed**
CPP-3385 LUNA-801	M	**Problem:** On Windows, a system crash can occur when you disconnect a SafeNet Luna Backup HSM from the computer while the PedClient service is running. **Fixed**
CPP-1842 LUNA-1948	M	**Problem:** Secure NTP server connections using AutoKey authentication do not work. **Fixed**
CPP-632	M	**Problem:** When using CKdemo with HA groups, an **Attribute type invalid** error is returned. **Fixed**
LUNA-266	L	**Problem:** In LunaCM, **clientconfig deleteserver** deregisters the HSM server on the Client, but does not delete the HSM server certificate file from the <LunaClient_dir>/**cert/server** directory. Attempts to re-register the same server with a regenerated certificate fail. **Fixed**
LKX-2812	L	**Problem:** The HSM reports 3072-bit as the maximum allowed key size for the RSA 186-3 mechanisms (CKM_RSA_FIPS_186_3_AUX_PRIME_KEY_PAIR_GEN and CKM_RSA_FIPS_186_3_PRIME_KEY_PAIR_GEN), when it should report 4096-bit. **C_GetMechanismInfo** will report 3072 as the maximum size for these mechanisms. If your application uses **C_GetMechanismInfo** to query the maximum key size, it may prevent 4096 operations from working. **Fixed**
CPP-2820 CPP-2949	L	**Problem:** Network HSM 7 attempts to load K driver upon rebooting. **Fixed**
CPP-902 LUNA-1423	L	**Problem:** DSA SSH keypair is not regenerated by **sysconf ssh regenkeypair**. **Addressed:** DSA keys are being deprecated in OpenSSH due to weakness. Use RSA keys for SSH instead.

Revision History

Revision B: 23 January 2018

> Added to "Advisory Notes" on page 3:

- CKA_EXTRACTABLE=FALSE on New Private Keys

> Added to "Supported Cryptographic APIs" on page 5:

- Java 9

> Added to "Known Issues" on page 6:

- LUNA-2677
- LUNA-2663
- LUNA-2230

Revision A: 7 December 2017

> Initial Release

Support Contacts

If you encounter a problem while installing, registering, or operating this product, please refer to the documentation before contacting support. If you cannot resolve the issue, contact your supplier or Gemalto Customer Support.

Gemalto Customer Support operates 24 hours a day, 7 days a week. Your level of access to this service is governed by the support plan arrangements made between Gemalto and your organization. Please consult this support plan for further information about your entitlements, including the hours when telephone support is available to you.

Customer Support Portal

The Customer Support Portal, at https://supportportal.gemalto.com, is where you can find solutions for most common problems. The Customer Support Portal is a comprehensive, fully searchable database of support resources, including software and firmware downloads, release notes listing known problems and workarounds, a knowledge base, FAQs, product documentation, technical notes, and more. You can also use the portal to create and manage support cases.

> **NOTE** You require an account to access the Customer Support Portal. To create a new account, go to the portal and click on the **REGISTER** link.

Telephone Support

If you have an urgent problem, or cannot access the Customer Support Portal, you can contact Gemalto Customer Support by telephone. Calls to Gemalto Customer Support are handled on a priority basis.
